

Testimonials: Liver Disorder

June 18, 2007

Master Hou has been treating me for the last ten years. I had been denied a life insurance policy when my blood test showed high liver enzymes. I went to my MD and he suggested that I might have hepatitis and over the next year he had me tested for hepatitis A, B, and C. All of the tests came back negative and he diagnosed me as having a fatty liver most likely caused by poor diet and alcohol. I abstained from alcohol for a year but my test still came out high.

My wife had been receiving treatment from Master Hou for her left arm in which she had experienced lack of strength. She had followed the traditional medical route going to her MD and a chiropractor but had not gotten her strength back. After a few visits with Master Hou she was again able to use her left arm normally. She recommended that I make an appointment to see him.

I explained to Master Hou my diagnosis and he started treating me for my "fatty" liver. I went to him about 6 or 7 times the first year. He also recommended that I start on his water fast. I have completed about fourteen fasts with Master Hou and I continued with my treatment about every two months on average. I have also attended his QiGong classes. I am 63 years old and my liver enzymes have been reading normal for many years. My overall health is very good and I have experienced none of the physical problems that a lot of friends have at my age.

I wish to thank Master Hou for all of his help and I will continue with him as a patient.

Cordially,

Jim H.
